CS224 - Spring 2022 - Lab #3 (Version 1: March 7, 7:01)

MIPS Assembly Language with Program as Data, Recursion, Linked Lists

Dates:

Section 1: Mon, 21 Mar, 8:30-12:20 in EA-Z04 Section 2: Wed, 16 Mar, 13:30-17:20 in EA-Z04 Section 3: Tue, 15 Mar, 13:30-17:20 in EA-Z04 Section 4: Fri, 18 Mar, Fri 08:30-12:20 in EA-Z04 Section 5: Wed, 16 Mar, 8:30-12:20 in EA-Z04 Section 6: Fri, 18 Mar, 13:30-17:20 in EA-Z04

Due to the lab rotation policy the first Lab3 session will be with Section 3 (March 15, Tuesday). After that Section 2, 4, 5, 6 will do their labs in the same week on their respective lab days. Section 1 will do Lab3 in the following week on March 21. See the course syllabus for the lab days.

Lab4 Days:

All will be done in their regular days with no rotation (Section 1 on Monday March 28 and other sections follow it in their respective lab days Section 3 on Tuesday March 29 etc.).

TAs;Tutor:

Section 1: Pouya Ghahramanian, Pouria Hasani; Fazıl Keskin Section 2: Alper Şahıstan, Hüseyin Eren Çalık; Burak Öçalan

Section 3: Kemal Büyükkaya, Kenan Çağrı Hırlak

Section 4: Pouria Hasani, Sepehr Bakhshi

Section 5: Kenan Çağrı Hırlak, Soheil Abadifard; Alper Mumcular

Section 6: Alper Şahıstan, Soheil Abadifard

TA name (x No of labs): email address

Alper Şahıstan (x2): alper.sahistan@bilkent.edu.tr Hüseyin Eren Çalık (x1): eren.calik@bilkent.edu.tr Kemal Büyükkaya (x1): kemal.buyukkaya@bilkent.edu.tr Kenan Çağrı Hırlak (x2): cagri.hirlak@bilkent.edu.tr Pouria Hasani (x2): pouria.hasani@bilkent.edu.tr

Pouya Ghahramanian (x1): ghahramanian@bilkent.edu.tr Sepehr Bakhshi (x1): sepehr.bakhshi@bilkent.edu.tr Soheil Abadifard (x2): soheil.abadifard@bilkent.edu.tr

Tutor name (x No of labs): email address

Alper Mumcular (x1): alper.mumcular@ug.bilkent.edu.tr

Burak Öçalan (x1): burak.ocalan@ug.bilkent.edu.tr (Tutoring in the lab Thursdays, 6:15 - 8:00 pm)

Fazıl Keskin (x1): fazil.keskin@ug.bilkent.edu.tr

Purpose: 1. This lab aims learning **1**. Practicing Von Neumann's stored program concept. **2**. Implementation of linked lists in assembly language. **3**. Implementation of recursion in MIPS.

If you use \$t registers in subprograms (once or more) in Part 1 (Preliminary Work) you will lose 10 points. If you use \$t registers in subprograms (once or more) in Part 2 (Lab Work) you will lose another 10 points.

Preliminary Work: 40 points

- 1. Instruction count (20 points)
- 2. Recursive division (20 points)

Lab Work: 60 points

- 1. Recursively print a linked list in reverse order (20 points)
- 2. Iteratively generate a copy of a linked list (20 points)
- 3. Recursively generate a copy of a linked list (20 points)

Important Notes for All Labs About Attendance, Performing and Presenting the Work

- 1. You are obliged to read this document word by word and are responsible for the mistakes you make by not following the rules.
- 2. Not attending to the lab means 0 out of 100 for that lab. If you attend the lab but do not submit the preliminary part you will lose only the points for the preliminary part.
- 3. Try to complete the lab part at home before coming to the lab. Make sure that you show your work to your TA and answer his questions to show that you know what you are doing before uploading your lab work and follow the instructions of your TAs.
- 4. In all labs if you are not told you may assume that inputs are correct.
- 5. In all labs when needed you have to provide a simple user interface for inputs and outputs.
- 6. Presentation of your work

You have to provide a neat presentation prepared in txt form. Your programs must be easy to understand and well structured.

Provide following six lines at the top of your submission for preliminary and lab work (make sure that you include the course no. CS224, important for ABET documentation).

CS224

Lab No.

Section No.

Your Full Name

Bilkent ID

Date

Please also make sure that you work is identifiable: In terms of which program corresponds to which part of the lab.

7. If we suspect that there is cheating we will send the work with the names of the students to the university disciplinary committee.

DUE DATE PRELIMINARY WORK: SAME FOR ALL SECTIONS

No late submission will be accepted. Please do not try to break this rule and any other rule we set.

- 1. Please upload your programs of preliminary work to Moodle by 9:30 am on Tuesday March 15, 2022.
- 2. Please note that the submission closes sharp at 9:30 am and no late submissions will be accepted. You can make resubmissions so do not wait for the last moment. Submit your work earlier and change your submitted work if necessary. Note that only the last submission will be graded.
- 3. Please familiarize yourself with the Moodle course interface, find the submission entry early, and avoid sending an email like "I cannot see the submission facility." (As of now it is not yet opened.)
- 4. Do not send your work by email attachment they will not be processed. They have to be in the Moodle system to be processed.
- 5. Use filename **StudentID_FirstName_LastName_SecNo_PRELIM_LabNo.txt** Only a NOTEPAD FILE (txt file) is accepted. Any other form of submission receives 0 (zero).

DUE DATE PART LAB WORK: (different for each section) YOUR LAB DAY

- 1. You have to demonstrate your lab work to your TA for grading. Do this by 12:00 in the morning lab and by 17:00 in the afternoon lab. Your TAs may give further instructions on this. If you wait idly and show your work last minute, your work may not be graded.
- 2. At the conclusion of the demo for getting your grade, you will **upload your Lab Work** to the Moodle Assignment, for similarity testing by MOSS. See below for the details of lab work submission.
- 3. Try to finish all of your lab work before coming to the lab, but make sure that you upload your work after making sure that it is analyzed by your TA and/or you are given the permission by your TA to upload.

Part 1. Preliminary Work (40 points)

1. instructionCount (20 Points): Write a non recursive subprogram that counts the number add (e.g., "add \$t0, \$t1, \$t2"), ori (or immediate), lw (load word) instructions and returns these counts as its results. The address of the first instruction to be considered in counting is given in \$a0, and the address of the last instruction to be considered in counting is given in \$a1. Your main program should invoke this subprogram twice: first for the main (itself), and for the second time for the subprogram.

As you see, in this program your main program becomes an input data and in the second call the subprogram becomes its own data (like an medical operator operating itself). Provide meaningful output in main so that you and your TA can validate the correctness of your program.

Note that, in our practice to simplify things, we write MIPS programs in a single source file; therefore, all labels are at the global scale. For example, if you label the first instruction of your subprogram with the label L1, and its last instruction with the label L2, you can pass these addresses to the subprogram with load address instructions in main (la \$a0, L1; la \$a1, L2).

In MARS settings find "Self-modifying code" and mark that option so that you can access the machine instructions as if they are data.

2. RecursiveDivision (20 points): Write a **recursive** MIPS subprograms that finds the division of a positive number by another positive number by successive subtractions. Your main program must provide a user interface: It should get a pair of numbers from the user provide the answer, and should ask the user if the user wants to continue, if so it should ask the next pair of numbers, etc.

Part 2. Lab Work (60 points)

In the following parts first construct a linked list that contains ten numbers (1, 2, 3, 10 in this order). For the linked list construction use the program provided to you in the Moodle lab folder that contains this lab assignment (modify it as needed). Display the linked list again with the program you are given to make sure that the linked list is constructed properly. After that do what you are asked in each part below. You must provide simple easy to follow program output with proper messages for the user (your TA).

Implement each part in a separate source program for easy grading and to prevent confusion during grading.

- **1**. **DisplayReverseOrderRecursively (20 points)**: Write a **recursive** program to display the elements of a linked list in reverse order (10, 9, ... 1). The list head is passed in \$a0. Provide a simple user interface.
- **2. DuplicateListIterative (20 points)**: Write a **non recursive** subprogram to duplicate a linked list. When called \$a0 points to the original list. It returns the new list head in \$v0. Provide a simple user interface.
- **3. DuplicateListRecursive (20 points)**: Write a **recursive** subprogram to duplicate a linked list. When called \$a0 points to the original list. It returns the new list head in \$v0. Provide a simple user interface.

Part 3. Submit Lab Work for MOSS Similarity Testing

- 1. Submit your Lab Work MIPS codes for similarity testing to Moodle.
- 2. You will upload one file. Use filename StudentID_FirstName_LastName_SecNo_LAB_LabNo.txt
- 3. Only a NOTEPAD FILE (txt file) is accepted. No txt file upload means you get 0 from the lab. Please note that we have several students and efficiency is important.
- 4. Even if you didn't finish, or didn't get the MIPS codes working, you must submit your code to the Moodle Assignment for similarity checking.
- 5. Your codes will be compared against all the other codes in the class, by the MOSS program, to determine how similar it is (as an indication of plagiarism). So be sure that the code you submit is code that you actually wrote yourself!

Part 4. Cleanup

- 1. After saving any files that you might want to have in the future to your own storage device, erase all the files you created from the computer in the lab.
- 2. When applicable put back all the hardware, boards, wires, tools, etc where they came from.
- 3. Clean up your lab desk, to leave it completely clean and ready for the next group who will come.

LAB POLICIES

- 1. You can do the lab only in your section. Missing your section time and doing in another day is not allowed.
- 2. The questions asked by the TA will have an effect on your lab score.
- 3. Lab score will be reduced to 0 if the code is not submitted for similarity testing, or if it is plagiarized. MOSS-testing will be done, to determine similarity rates. Trivial changes to code will not hide plagiarism from MOSS—the algorithm is quite sophisticated and powerful. Please also note that obviously you should not use any program available on the web, or in a book, etc. since MOSS will find it. The use of the ideas we discussed in the classroom is not a problem.
- 4. You must be in lab, working on the lab, from the time lab starts until your work is finished and you leave.
- 5. No cell phone usage during lab.
- 6. Internet usage is permitted only to lab-related technical sites.
